

WECAN On-line training: June 25th, 2015

Health and Climate Change, What's at stake and what can be done?

Angela Monti Fox, Founder The Mothers Project

www.themothersproject.org

The Mothers Project, The beginning...

Bringing a Unique Perspective: Unseen Global Health Crisis

- fossil fuel mining and children's health
- development of personality and intellect
- birth outcomes

High Volume Hydraulic Fracturing (HVHF): Health impacts for Pregnant Women & Children

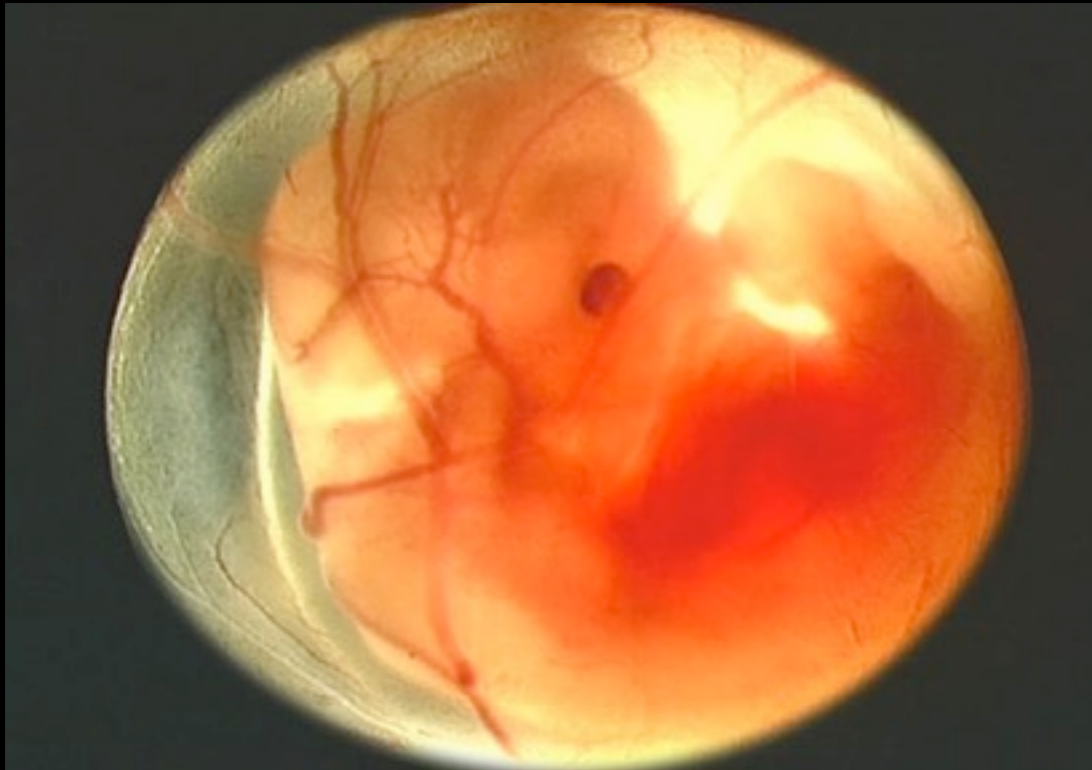

What we knew already

COLORADO STUDY: BRITH OUTCOMES

- Pre term labor
- Low birth weigh babies
- Babies with congenital heart defects
- Neural tube defects
- Oral clefts

Child Centered Model

Saving children could mean
saving us all

Effects on Pre-natal Environment

- The dose
- Critical periods
- Endocrine disruptors

We have the power in the science

- Do we have enough power in the people?

Today's Fossil Fuels and the Future of our Children's Health

Stony Brook University, New York
October 15, 2015

The Science - state of the art research showing multi-generational impacts on health from conception on into adulthood.

The Mothers' Voices - representing different communities from around the country, and their struggles for change.

The Policies - the status of change from the perspective of federal, state and local laws to move toward sustainable solutions.

This is a dynamic and unique opportunity to hear from mothers on the front lines, cutting edge scientists and innovative policy makers; making their voices heard. Learn how both their failures and their successes are shaping the present and will inform future policies that will create change.
